

APTUS AIR WITH BLE LOCATION

Take your Aptus Air system to the next level with real time location. With a simple “Over the Air” update the Alexys Air call stations can provide greater location detail than ever before. Using the built in BLE (Bluetooth low energy) beacon each call station provides detail of where Resident’s and staff are and can report back in real time the need for assistance at a specific location or the time a staff member has spent in attendance or even if multiple staff are in attendance.

Software configured, the Alexys system is designed to provide improved functionality with ongoing software updates, all designed and ready to roll out as facilities need. With the latest firmware all Aptus Air call points now have double the functionality. With a simple “Over the Air” update not only can we configure the BLE beacon but all call points are upgraded to include a long press feature, escalating a call to another level. Nurse Call to Nurse Assist, Nurse Assist to Emergency etc. A long press of the cancel button enters the call point into cleaning mode, recording cleaned time and identifying the staff member initiating the event*.

Aptus Aware android messaging App provides improved clarity as to who, when and for how long service was provided. All reportable, providing real data on how a facility is operating.

Resident’s feel safer than ever knowing when they press their pendant for help, not only are they identified but their location is also provided, minimising the response time when they are in need.

Scalable to meet the needs of the facility, one pendant at a time. Turn on the functionality and improve Resident confidence and staff visibility today.

Online 24/7 remote diagnostics, programming and support are available. Changes can be made simply through a web browser reducing costly site visits by service technicians for adds, moves and changes. Delivering updates online and without interruption, keeping your system modern with the latest features is fundamental to the Aptus system.

Don’t have Aptus yet? The time is right to upgrade, the Aptus solution provides for the latest features and functionality, including Wi-Fi, Poe (Power over Ethernet), BLE (Bluetooth Low Energy), RTLS (real time location system), Auto presence, Duress, Voice to the bedside and more.

Aptus is a world class solution that can be delivered one component at a time. Take the time to work within your budget now, knowing that we can refurbish one room, one wing or your entire facility at your pace, putting an end to the expensive upgrades that the industry has suffered with for decades. The Aptus solution is best of breed whether it be Wi-Fi or Poe, we are delivering tomorrow’s technology today.

UPGRADE TO APTUS TODAY WHERE THE POSSIBILITIES ARE ENDLESS.

*Aptus Aware in attendance must be in use
